

**(i) CLAIM OR CLAIMS.**

What is claimed in this document to be secured by a United States patent is

- a. A colander to be utilized in a dual basin kitchen sink for rinsing and straining comprised of:
- b. an engagement clamping devise for quickly securing the colander w/ it to the sink's central dividing wall;
- c. a bowl portion consisting of a plurality of perforations in side walls containing an upper rim
- d. a coupler portion coupled to a second end of said engagement clamping devise in which the coupler contacts the back surface of the sink division side wall, whereby supporting the colander therefrom with said bowl portion, securely clamping and locking said colander in place elevated above the bottom surface of the sink basin
- e. a twist action, threaded post torsion system integrated into said coupler portion and connecting said bowl portion enabling surface clamping and continuous adjustment to secure colander to dividing wall of dual sink basin.
